**UNIVERSITY OF
CALGARY**

Basics: What is an indexical and a shift?

- Indexical: An entity which gets its semantic meaning from the context in which it is used.
 - 'I' in English- the speaker of actual utterance.

(1) Situation to be reported: John says: "I am a hero"

- a. ***John** says that **I** am a hero.
- b. **John** says that **he** is a hero.

(Şener & Şener, 2011)

- Indexical Shift describes a situation where an indexical is not interpreted according to the speech context

Turkish Indexical Shift – Established Facts

- Şener & Şener (2011) propose that the form of the pronoun is the determiner of the availability of shifting.

(2) a. **Seda** [**ben** sınıf-ta kal-dım] san-ıyor.

Seda 1SG.NOM class-LOC flunk-PST.1SG believe-PRES.3SG

“**Seda** believes that **I** flunked.”

b. **Seda** [**pro** sınıf-ta kal-dım] san-ıyor.

Seda class-LOC flunk-PST.1SG believe-PRES.3SG

“**Seda** believes that **she/I** flunked.”

But they both can shift...

- 1st person *pronoun* (overt or null) receives shifted meaning under the verb *istemek* “to want”.

(3) a. **Ali** hep [ben kazanay-ım] ist-iyor.

Ali always 1.SG win-1SG want-PROG.3SG

“Ali ‘always wants {Ali/me} to win.”

b. **Ali** hep [*pro* kazanay-ım] ist-iyor.

Ali always win-1SG want-PROG.3SG

‘Ali always wants {Ali/me} to win.

...and sometimes obligatorily!

(4) a. **Cenk** bana [**ben** Melis'-i sev-iyorum] de-di.
Cenk-NOM 1SG.DAT 1SG.NOM Melis-ACC love-PRES.1SG say-PST
“**Cenk** said to me that **he** loves Melis.”

b. **Cenk** bana [*pro* Melis-i sev-iyorum] de-di.
Cenk 1SG.DAT Melis-ACC love-PRES.1SG say-PST
“**Cenk** said to me that **he** loves Melis.”

Questions and Proposal

- Q1: Why do the shifting properties of different pronouns depend on the selecting verbs?
- Q2: To what extent can this be captured in a single analysis?
- In this talk, we will answer these questions by adopting and expanding the theoretical framework in Deal (2019).

Content

- Introduction of the issue
- Core components of Deal's approach
- Closer discussion of Turkish data
- Application of Deal's analysis
- Extension into emphatic elements

- Application of Deal's analysis
- Extension into emphatic elements

Indexical Shift: Generally optional

- In many diverse languages, indexicals may get their semantic value from a reported speech act.

(5) **Mary**-ka [**nay**-ka yengweng-i-lako] malhayessta.

Mary-NOM 1SG-NOM hero-be-COMP said

'**Mary** said that {I am, **Mary** is} a hero.'

(Korean: Park 2016)

Indexical Shift: Not Just People

- Shifts can extend to locatives and temporals as well

(6) Uttered in **Seoul**:

Amherst-eyse Mary-ka [John-i **yeki**-eyse thayenassta-ko] malhayessta.

Amherst-at Mary-NOM John-NOM here-at born-COMP said

‘Mary said in **Amherst** that John was born in {**Amherst**, **Seoul**}.’

(Korean: Park, 2016)

Deal 2019

- Typology of Indexical Shift Phenomena

- What shifts?

- Time > 1st Person > 2nd Person > Locations

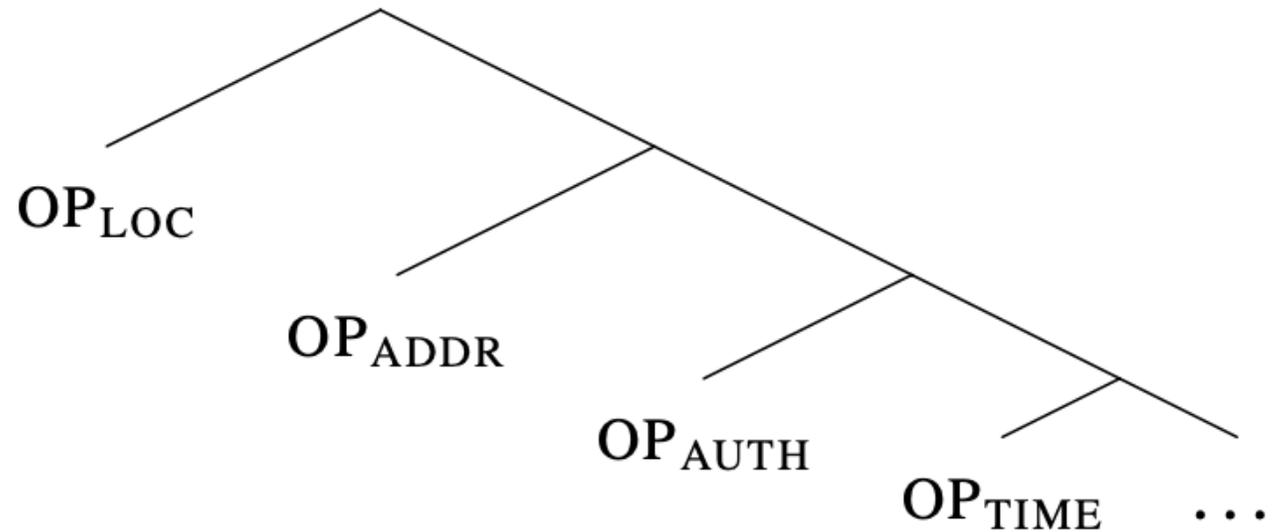

- Which embedding verbs allow shifts?

- Speech > Thought > Knowledge

Languages may also show requirements of *de se* interpretation of shifted elements, along the same basic shifting hierarchy

Hierarchy of Operators

- These operators in the CP domain of the embedded clause overwrite context variables used to interpret the embedded clause
- Temporals are most likely to shift, and thus have the least articulated structure

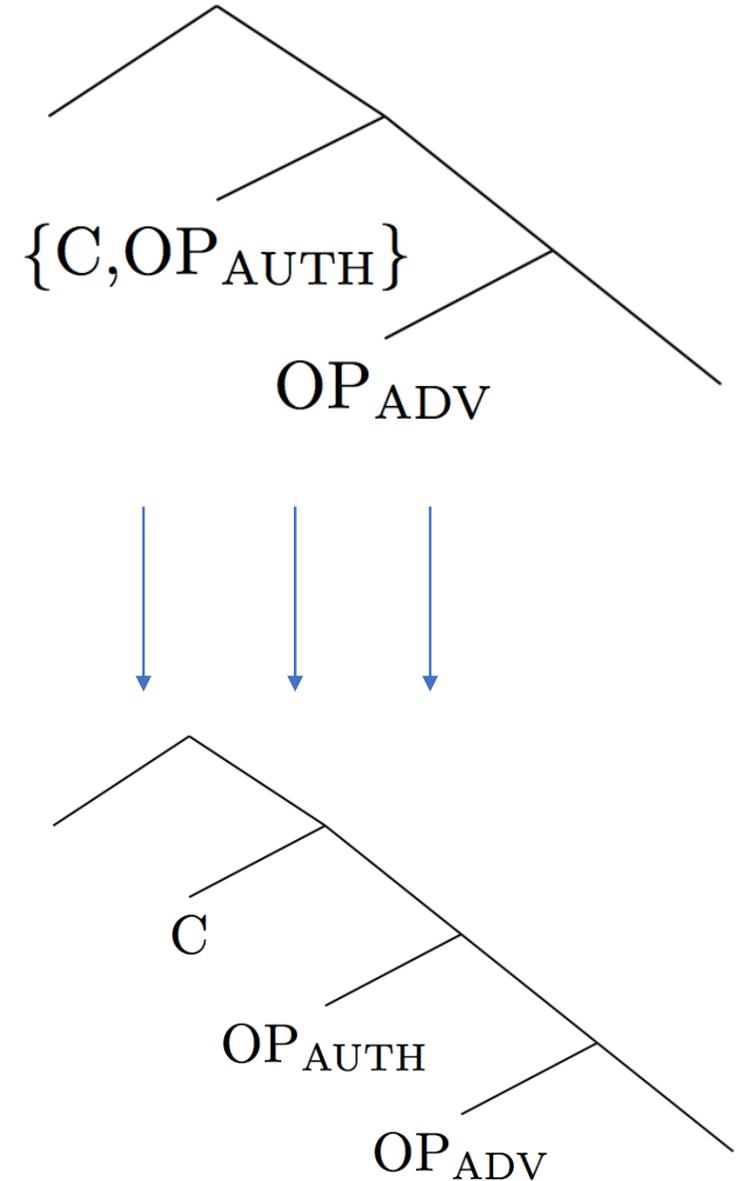

(7) **Whenever** you wash your car, it rains **tomorrow**.
{*Day after utterance, ?Day after car washing}

(Anderson, 2019)

Operator Bundling and *de se*

- Different operators can bundle (e.g. OP_{PERS} bundling 1st and 2nd person, explaining Anand and Nevins (2004) SHIFT TOGETHER facts)
- Time and Location can bundle together as OP_{ADV} above or below the person operators
- Obligatory shifts are explained by bundling OPs with C
- Different verbs select more or less expansive structures
- Different operators directly encode *de se* requirements

Indexical Shift in Turkish

- Turkish is one of the languages in which indexical shift is observed (Şener & Şener, 2011; Özyıldız, 2012; Akkuş, 2019).
- Inconsistent findings
 - What controls the indexical shift in Turkish?
 - Is it optional or obligatory shift?

Are they “quotations”?

- *wh*-elements

(8) **Cenk** [ben kim-i gör-düm] de-di?

Cenk 1SG who-ACC see-PST.1SG say-PST.3S

“Who did **Cenk_i** say **he_i** saw?”

- NPI licensing

(9) **Cenk** [ben kimse-yi gör-düm] de-me-di.

Cenk 1SG anyone-ACC see-PST.1SG say-NEG-PST.3S

“**Cenk_i** didn’t say that **he_i** saw anyone.”

Cenk: *“Ben kimseyi gördüm.”

Indexical Shift in Turkish

- Özyıldız (2012) proposes that shifted reading for 1st person subjects – whether it is overt or not – is available under the verb *demek* “to say”.

(10) **Doktor** [nasil hasta-lan- dim (**ben**)] de- di?

Doctor how sick- PASS-PST.1SG (**1SG**) say-PST.3SG

“How did the **doctor**_i say that I/**he**_i got sick?”

- Concludes: Optional shift is observed in Turkish, under the verb *demek* “to say”.

Indexical Shift in Turkish

- Şener & Şener (2011) claim that the type of the pronoun determines if shifted reading is available. (1, repeated as 11 here)

(11) a. **Seda** [**ben** sınıf-ta kal-dım] san-ıyor.

Seda 1SG class-LOC flunk-PST.1SG believe-PRES.3SG

“**Seda** believes that **I** flunked.”

b. **Seda** [**pro** sınıf-ta kal-dı-m] san-ıyor.

Seda class-LOC flunk-PST.1SG believe-PRES.3SG

“**Seda**_i believes that **she**_i / **I** flunked.”

Pronoun Typology (Şener & Şener, 2011)

- They also note that null 1st person pronoun in Nominalized Complement Clauses do not shift.
- Therefore, they propose:

There are two different types of pronouns.

- Allowing the shift -> **pro**_{de se}
 - Not allowing the shift -> **pro**_{elsewhere}
-
- Context-shifting operator (OPs) “forces **pro**_{de se} to receive its meaning from reported speech act.”
 - **pro**_{elsewhere} always get its semantic value from the actual context of speech as it cannot be manipulated by a shifting operator.

Contradiction Between the Studies

- Özyıldız (2012), Akkuş (2019)
 - Indexicals optionally shift under the verb *demek* “to say”.
 - Generalizing the behavior of *Indexical Shift* in Turkish.
 - 1SG *pronoun* optionally allows indexical shift (either null or overt).
- Şener & Şener (2011)
 - Null subjects optionally shift under the verb *sanmak* “to think”.
 - The form of the *pronoun* regulates shifting.
 - With overt *ben* (1SG), shifted reading is not allowed.

Non-literal use

(12) **Sena** da [**ben** master yap-ıyorum] san-ıyor.

Sena also 1SG master do-PROG.1SG think-PRES.3SG

“And **Sena** thinks **she is/ I am** having a master’s degree.”

Another Indexical-shifting verb: *istemek*

- 1st person *pronoun* (overt or null) receives shifted meaning under the verb *istemek* “to want”.

(13) a. **Ali** hep [**ben** kazanay-im] ist-iyor.

Ali always 1.SG win-1SG want-PROG.3SG

“**Ali** always wants { **Ali**/**me** } to win.”

b. **Ali** hep [**pro** kazanay-im] ist-iyor.

Ali always win-1SG want-PROG.3SG

“**Ali** always wants { **Ali**/**me** } to win.”

Overall picture

	to say	to claim	to want	to think	to fool oneself
	<i>demek</i>	<i>demek</i>	<i>istemek</i>	<i>sanmak</i>	<i>sanmak</i>
Overt 1 st person	✓!	✓	✓	✗	✓
Null 1 st person	✓!	✓	✓	✓	✓
2 nd person	✓	✓	✗	✗	✗
Locative	✓	✓	✓	✗	✓
Temporal	✓	✓	✓	✓	✓

Shifted reading:

✓!: obligatory.

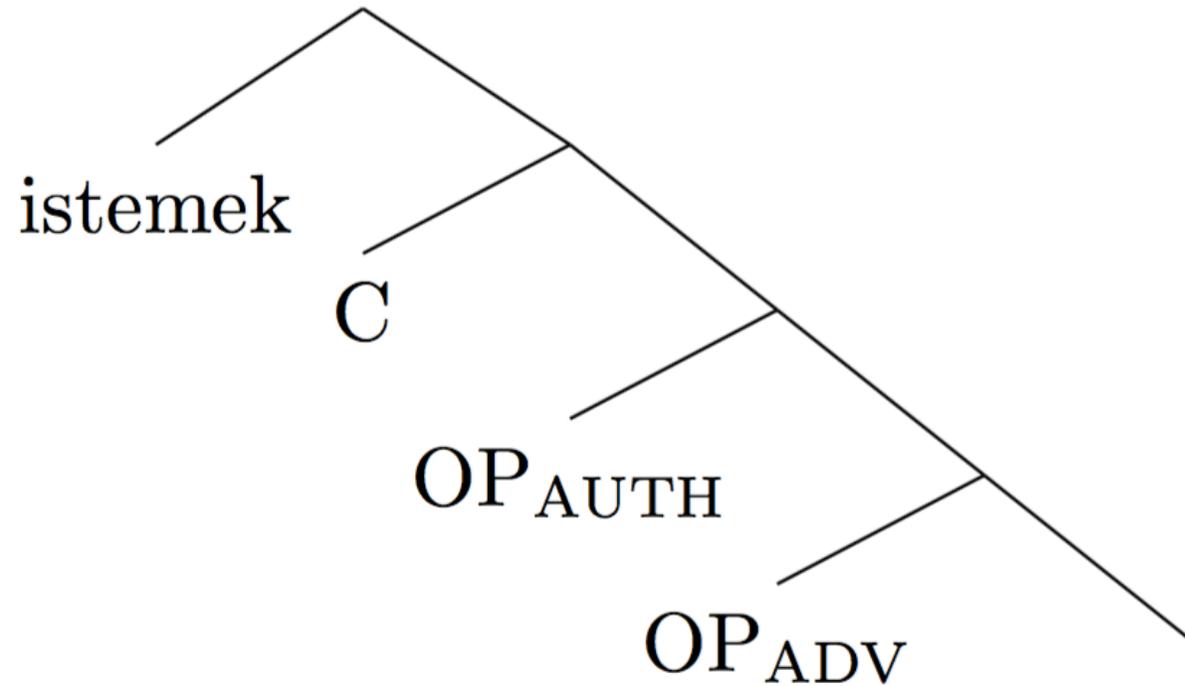

✓: possible.

✗: impossible.

Content

- Introduction of the issue
- Core components of Deal's approach
- Closer discussion of Turkish data
- **Application of Deal's analysis**
- Extension into emphatic elements

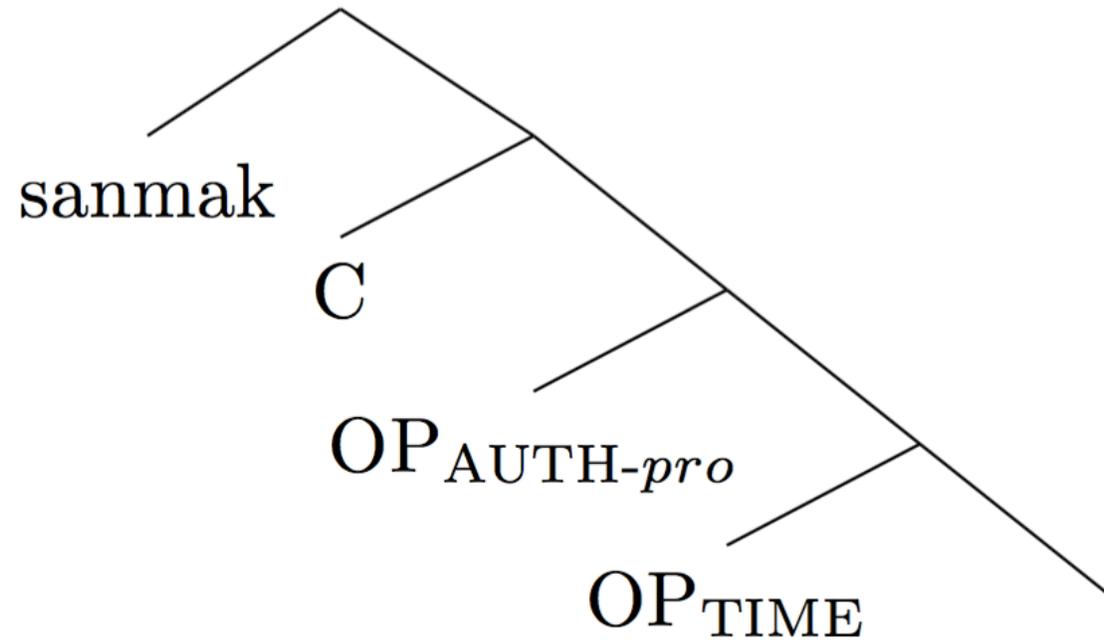

istemek – ‘want’

- Easily captured with Deal’s existing tools

	to want
	<i>istemek</i>
Overt 1 st person	✓
Null 1 st person	✓
2 nd person	✗
Locative	✓
Temporal	✓

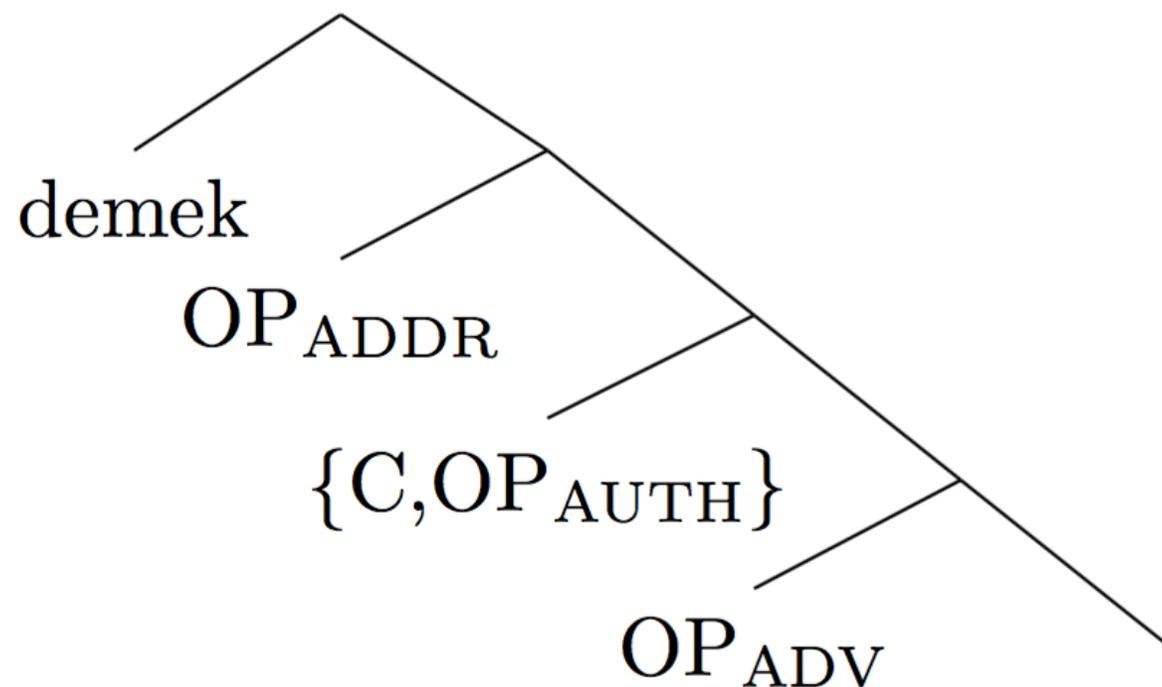

sanmak – ‘think’

	to think	to fool oneself
	<i>sanmak</i>	<i>sanmak</i>
Overt 1 st person	X	✓
Null 1 st person	✓	✓
2 nd person	X	X
Locative	X	✓
Temporal	✓	✓

- Şener & Şener typology does not work across verbs
- We propose a form-specific *OP_{AUTH}*

demek – ‘say’

	to say	to claim
	<i>demek</i>	<i>demek</i>
Overt 1 st person	✓!	✓
Null 1 st person	✓!	✓
2 nd person	✓	✓
Locative	✓	✓
Temporal	✓	✓

- Bundling OP_{AUTH} with C captures the obligatory shift
- Maintaining the hierarchy predicts optional high OP_{ADDR}

Summing Up

- Deal's operator hierarchy maps well to the differences between verbs
- The *de se* / *de te* facts in Turkish do not perfectly align with operator bundling
- A more limited operator for just null first person seems necessary, in the same context where OP_{LOC} is not bundled with OP_{TIME}

Content

- Introduction of the issue
- Core components of Deal's approach
- Closer discussion of Turkish data
- Application of Deal's analysis
- **Extension into emphatic elements**

Obligatory shift with of the emphatic

- Addition of the emphatic *ben kendim* “I myself” results in an obligatorily shifted meaning.

(14) **Ali** hep [**ben** kendi-m kazanay-ım] ist-iyor.

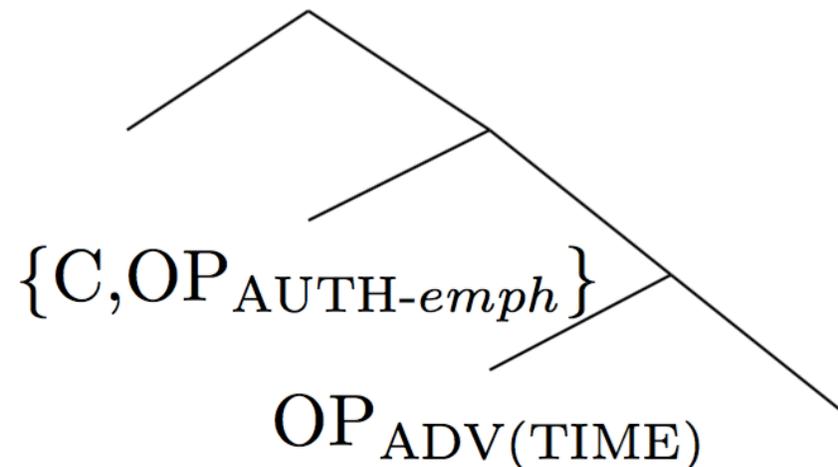

Ali always 1SG REFL-1.SG win-1SG want-PROG.3SG

“**Ali** always wants {**Ali**/***me**} to win.”

- Shifting is obligatory with all verbs, and remains *de se*

An Obligatory Bundle

- Obligatory shift again suggests a bundle with C
- Now there is evidence for another form-specific OP_{AUTH} that is always bundled with C, regardless of verb
- This is still in line with Deal's hierarchy, recalling that we also have evidence for across the board low OP_{ADV} (or at least OP_{TIME})

Conclusion

- Deal's analysis predicts all of the observed facts with two caveats
 1. *De te* is unexpectedly required when the relevant operator is higher than C
 2. Different forms of indexicals have different shifting properties
- The *ben kendim* facts are most easily explained with a unique operator bundled at C
- Once there is independent evidence for form-specific operators, a very restricted one for ***pro*** is more plausible
- Still to do: formalize the way that different operators “see” the relevant forms
