The traditional arguments for the existence of God have been fairly thoroughly criticised by philosophers. But the theologian can, if he wishes, accept this criticism. He can admit that no rational proof of God’s existence is possible. And he can still retain all that is essential to his position, by holding that God’s existence is known in some other, non-rational way. I think, however, that a more telling criticism can be made by way of the traditional problem of evil. Here it can be shown, not that religious beliefs lack rational support, but that they are positively irrational, that the several parts of the essential theological doctrine are inconsistent with one another, so that the theologian can maintain his position as a whole only by a much more extreme rejection of reason than in the former case. He must now be prepared to believe, not merely what cannot be proved, but what can be disproved from other beliefs that he also holds.

The problem of evil, in the sense in which I shall be using the phrase, is a problem only for someone who believes that there is a God who is both omnipotent and wholly good. And it is a logical problem, the problem of clarifying and reconciling a number of beliefs: it is not a scientific problem that might be solved by further observations, or a practical problem that might be solved by a decision or an action. These points are obvious; I mention them only because they are sometimes ignored by theologians, who sometimes parry a statement of the problem with such remarks as ‘Well, can you solve the problem yourself?’ or ‘This is a mystery which may be revealed to us later’ or ‘Evil is something to be faced and overcome, not to be merely discussed’.

In its simplest form the problem is this: God is omnipotent; God is wholly good; and yet evil exists. There seems to be some contradiction between these three propositions, so that if any two of them were true the third would be false. But at the same time all three are essential parts of most theological positions: the theologian, it seems, at once must adhere and cannot consistently adhere to all three. (The problem does not arise only for
theists, but I shall discuss it in the form in which it presents itself for ordinary theism.)

However, the contradiction does not arise immediately; to show it we need some additional premises, or perhaps some quasi-logical rules connecting the terms 'good', 'evil', and 'omnipotent'. These additional principles are that good is opposed to evil, in such a way that a good thing always eliminates evil as far as it can, and that there are no limits to what an omnipotent thing can do. From these it follows that a good omnipotent thing eliminates evil completely, and then the propositions that a good omnipotent thing exists, and that evil exists, are incompatible.

A. ADEQUATE SOLUTIONS

Now once the problem is fully stated it is clear that it can be solved, in the sense that the problem will not arise if one gives up at least one of the propositions that constitute it. If you are prepared to say that God is not wholly good, or not quite omnipotent, or that evil does not exist, or that good is not opposed to the kind of evil that exists, or that there are limits to what an omnipotent thing can do, then the problem of evil will not arise for you.

There are, then, quite a number of adequate solutions of the problem of evil, and some of these have been adopted, or almost adopted, by various thinkers. For example, a few have been prepared to deny God's omnipotence, and rather more have been prepared to keep the term 'omnipotence' but severely to restrict its meaning, recording quite a number of things that an omnipotent being cannot do. Some have said that evil is an illusion, perhaps because they held that the whole world of temporal, changing things is an illusion, and that what we call evil belongs only to this world, or perhaps because they held that although temporal things are much as we see them, those that we call evil are not really evil. Some have said that what we call evil is merely the privation of good, that evil in a positive sense, evil that would really be opposed to good, does not exist. Many have agreed with Pope that disorder is harmony not understood, and that partial evil is universal good. Whether any of these views is true is, of course, another question. But each of them gives an adequate solution of the problem of evil in the sense that if you accept it this problem does not arise for you, though you may, of course, have other problems to face.

But often enough these adequate solutions are only almost adopted. The thinkers who restrict God's power, but keep the term 'omnipotence', may reasonably be suspected of thinking, in other contexts, that his power is really unlimited. Those who say that evil is an illusion may also be thinking, inconsistently, that this illusion is itself an evil. Those who say that 'evil' is merely privation of good may also be thinking, inconsistently, that privation of good is an evil. (The fallacy here is akin to some forms of the 'naturalistic fallacy' in ethics, where some think, for example, that 'good' is just what contributes to evolutionary progress, and that evolutionary progress is itself good.) If Pope meant what he said in the first line of his couplet, that ‘disorder’ is only harmony not understood, the ‘partial evil’ of the second line must, for consistency, mean ‘that which, taken in isolation, falsely appears to be evil’, but it would more naturally mean ‘that which, in isolation, really is evil’. The second line, in fact, hesitates between two views, that ‘partial evil’ isn’t really evil, since only the universal quality is real, and that ‘partial evil’ is really an evil, but only a little one.

In addition, therefore, to adequate solutions, we must recognise unsatisfactory inconsistent solutions, in which there is only a half-hearted or temporary rejection of one of the propositions which together constitute the problem. In these, one of the constituent propositions is explicitly rejected, but it is covertly re-asserted or assumed elsewhere in the system.

B. FALLACIOUS SOLUTIONS

Besides these half-hearted solutions, which explicitly reject but implicitly assert one of the constituent propositions, there are definitely fallacious solutions which explicitly maintain all the constituent propositions, but implicitly reject at least one of them in the course of the argument that explains away the problem of evil.

There are, in fact, many so-called solutions which purport to remove the contradiction without abandoning any of its constituent propositions. These must be fallacious, as we can see from the very statement of the problem, but it is not so easy to see in each case precisely where the fallacy lies. I suggest that in all cases the fallacy has the general form suggested above: in order to solve the problem one (or perhaps more) of its constituent propositions is given up, but in such a way that it appears to have been retained, and can therefore be asserted without qualification in other contexts. Sometimes there is a further complication: the supposed solution moves to and fro between, say, two of the constituent propositions, at one point asserting the first of these but covertly abandoning the second, at another point asserting the second but covertly abandoning the first. These
VII

THE PROBLEM OF EVIL AND SOME VARIETIES OF ATHEISM

WILLIAM L. ROWE

This paper is concerned with three interrelated questions. The first is: Is there an argument for atheism based on the existence of evil that may rationally justify someone in being an atheist? To this first question I give an affirmative answer and try to support that answer by setting forth a strong argument for atheism based on the existence of evil. The second question is: How can the theist best defend his position against the argument for atheism based on the existence of evil? In response to this question I try to describe what may be an adequate rational defense for theism against any argument for atheism based on the existence of evil. The final question is: What position should the informed atheist take concerning the rationality of theistic belief? Three different answers an atheist may give to this question serve to distinguish three varieties of atheism: unfriendly atheism, indifferent atheism, and friendly atheism. In the final part of the paper I discuss and defend the position of friendly atheism.

Before we consider the argument from evil, we need to distinguish a narrow and a broad sense of the terms 'theist', 'atheist', and 'agnostic'. By a 'theist' in the narrow sense I mean someone who believes in the existence of an omnipotent, omniscient, eternal, supremely good being who created the world. By a 'theist' in the broad sense I mean someone who believes in the existence of some sort of divine being or divine reality. To be a theist

1 Some philosophers have contended that the existence of evil is logically inconsistent with the existence of the theistic God. No one, I think, has succeeded in establishing such an extravagant claim. Indeed, granted incompatibilism, there is a fairly compelling argument for the view that the existence of evil is logically consistent with the existence of the theistic God. (For a lucid statement of this argument see Alvin Plantinga, God, Freedom, and Evil (New York, 1974), 29–59.) There remains, however, what we may call the evidential form—as opposed to the logical form—of the problem of evil: the view that the variety and profusion of evil in our world, although perhaps not logically inconsistent with the existence of the theistic God, provides, nevertheless, rational support for atheism. In this paper I shall be concerned solely with the evidential form of the problem, the form of the problem which, I think, presents a rather severe difficulty for theism.

In developing the argument for atheism based on the existence of evil, it will be useful to focus on some particular evil that our world contains in considerable abundance. Intense human and animal suffering, for example, occurs daily and in great plentitude in our world. Such intense suffering is a clear case of evil. Of course, if the intense suffering leads to some greater good, a good we could not have obtained without undergoing the suffering in question, we might conclude that the suffering is justified, but it remains an evil nevertheless. For we must not confuse the intense suffering in and of itself with the good things to which it sometimes leads or of which it may be a necessary part. Intense human or animal suffering is in itself bad, an evil, even though it may sometimes be justified by virtue of being a part of, or leading to, some good which is unobtainable without it. What is evil in itself may sometimes be good as a means because it leads to something that is good in itself. In such a case, while remaining an evil in itself, the intense human or animal suffering is, nevertheless, an evil which someone might be morally justified in permitting.

Taking human and animal suffering as a clear instance of evil which occurs with great frequency in our world, the argument for atheism based on evil can be stated as follows:

1. There exist instances of intense suffering which an omnipotent, omniscient being could have prevented without thereby losing some greater good or permitting some evil equally bad or worse. 2

2 If there is some good, G, greater than any evil, (1) will be false for the trivial reason that no matter what evil, E, we pick the conjunctive good state of affairs consisting of G and E will outweigh E and be such that an omnipotent being could not obtain it without permitting E. (See Alvin Plantinga, God and Other Minds (Ithaca, 1967), 167.) To avoid this objection we may
2. An omniscient, wholly good being would prevent the occurrence of any intense suffering it could, unless it could not do so without thereby losing some greater good or permitting some evil equally bad or worse.

3. There does not exist an omnipotent, omniscient, wholly good being. What are we to say about this argument for atheism, an argument based on the profusion of one sort of evil in our world? The argument is valid, therefore, if we have rational grounds for accepting its premises, to that extent we have rational grounds for accepting atheism. Do we, however, have rational grounds for accepting the premises of this argument?

Let’s begin with the second premise. Let $s_1$ be an instance of intense human or animal suffering which an omniscient, wholly good being could prevent. We will also suppose that things are such that $s_1$ will occur unless prevented by the omnipotent, wholly good (OG) being. We might be interested in determining what would be a sufficient condition of OG failing to prevent $s_1$. But, for our purpose here, we need only try to state a necessary condition for OG failing to prevent $s_1$. That condition, so it seems to me, is this:

Either

(i) there is some greater good, $G$, such that $G$ is obtainable by OG only if OG permits $s_1$,  

or

(ii) there is some greater good, $G$, such that $G$ is obtainable by OG only if OG permits either $s_1$ or some evil equally bad or worse,

or

(iii) $s_1$ is such that it is preventable by OG only if OG permits some evil equally bad or worse.

insert ‘unreplacable’ into our premises (1) and (2) between ‘some’ and ‘greater’. If E isn’t required for $G$, and G is better than $G$ plus E, then the good conjunctive state of affairs composed of $G$ and E would be replaceable by the greater good of G alone. For the sake of simplicity, however, I will ignore this complication both in the formulation and discussion of premises (1) and (2).

3 Three clarifying points need to be made in connection with (1). First, by ‘good’ I don’t mean to exclude the fulfilment of certain moral principles. Perhaps preventing $s_1$ would preclude certain actions prescribed by the principles of justice. I shall allow that the satisfaction of certain principles of justice may be a good that outweighs the evil of $s_1$. Second, even though (1) may suggest it, I don’t mean to limit the good in question to something that would follow in time the occurrence of $s_1$. And, finally, we should perhaps not fault OG if the good G, that would be lost were $s_1$ prevented, is not actually greater than $s_1$, but merely such that allowing $s_1$ and G, as opposed to preventing $s_1$ and thereby losing G, would not alter the balance between good and evil. For reasons of simplicity, I have left this point out in stating (1), with the result that (1) is perhaps a bit stronger than it should be.

It is important to recognize that (iii) is not included in (i). For losing a good greater than $s_1$ is not the same as permitting an evil greater than $s_1$. And this because the absence of a good state of affairs need not itself be an evil state of affairs. It is also important to recognize that $s_1$ might be such that it is preventable by OG without losing G (so condition (i) is not satisfied) but also such that if OG did prevent it, G would be lost unless OG permitted some evil equal to or worse than $s_1$. If this were so, it does not seem correct to require that OG prevent $s_1$. Thus, condition (ii) takes into account an important possibility not encompassed in condition (i).

Is it true that if an omniscient, wholly good being permits the occurrence of some intense suffering it could have prevented, then either (i) or (ii) or (iii) obtains? It seems to me that it is true. But if it is true then so is premise (2) of the argument for atheism. For that premise merely states in more compact form what we have suggested must be true if an omniscient, wholly good being fails to prevent some intense suffering it could prevent. Premise (2) says that an omniscient, wholly good being would prevent the occurrence of any intense suffering it could, unless it could not do so without thereby losing some greater good or permitting some evil equally bad or worse. This premise (or something not too distant from it) is, I think, held in common by many atheists and nontheists. Of course, there may be disagreement about whether something is good, and whether, if it is good, one would be morally justified in permitting some intense suffering to occur in order to obtain it. Someone might hold, for example, that no good is great enough to justify permitting an innocent child to suffer terribly. Again, someone might hold that the mere fact that a given good outweighs some suffering and would be lost if the suffering were prevented, is not a morally sufficient reason for preventing the suffering. But to hold either of these views is not to deny (2). For (2) claims only that if an omniscient, wholly good being permits intense suffering then either there is some greater good that would have been lost, or some equally bad or worse evil that would have occurred, had the intense suffering been prevented. (2) does not purport to describe what might be a sufficient condition for an omniscient, wholly good being to permit intense suffering, only what is a necessary condition. So stated, (2) seems to express a belief that accords with our basic moral principles, principles shared by both theologians and nontheists. If we are to fault the argument for atheism, therefore, it seems we must find some fault with its first premise.

Suppose in some distant forest lightning strikes a dead tree, resulting in a forest fire. In the fire a fawn is trapped, horribly burned, and lies in terrible death.
agony for several days before death relieves its suffering. So far as we can see, the fawn's intense suffering is pointless. For there does not appear to be any greater good such that the prevention of the fawn's suffering would require either the loss of that good or the occurrence of an evil equally bad or worse. Nor does there seem to be any equally bad or worse evil so connected to the fawn's suffering that it would have had to occur had the fawn's suffering been prevented. Could an omnipotent, omniscient being have prevented the fawn's apparently pointless suffering? The answer is obvious, as even the theist will insist. An omnipotent, omniscient being could have easily prevented the fawn from being horrifyingly burned, or, given the burning, could have spared the fawn the intense suffering by quickly ending its life, rather than allowing the fawn to lie in terrible agony for several days. Since the fawn's intense suffering was preventable and, so far as we can see, pointless, doesn't it appear that premise (1) of the argument is true, that there do exist instances of intense suffering which an omnipotent, omniscient being could have prevented without thereby losing some greater good or permitting some evil equally bad or worse?

It must be acknowledged that the case of the fawn's apparently pointless suffering does not prove that (1) is true. For even though we cannot see how the fawn's suffering is required to obtain some greater good (or to prevent some equally bad or worse evil), it hardly follows that it is not so required. After all, we are often surprised by how things we thought to be unconnected turn out to be intimately connected. Perhaps, for all we know, there is some familiar good outweighing the fawn's suffering to which that suffering is connected in a way we do not see. Furthermore, there may well be unfamiliar goods, goods we haven't dreamed of, to which the fawn's suffering is inextricably connected. Indeed, it would seem to require something like omniscience on our part before we could lay claim to knowing that there is no greater good connected to the fawn's suffering in such a manner that an omnipotent, omniscient being could not have achieved that good without permitting that suffering or some evil equally bad or worse. So the case of the fawn's suffering surely does not enable us to establish the truth of (1).

The truth is that we are not in a position to prove that (1) is true. We cannot know with certainty that instances of suffering of the sort described in (1) do occur in our world. But it is one thing to know or prove that (1) is true and quite another thing to have rational grounds for believing (1) to be true. We are often in the position where in the light of our experience and knowledge it is rational to believe that a certain statement is true, even though we are not in a position to prove or to know with certainty that the statement is true. In the light of our past experience and knowledge it is, for example, very reasonable to believe that neither Goldwater nor McGovern will ever be elected President, but we are scarcely in the position of knowing with certainty that neither will ever be elected President. So, too, with (1), although we cannot know with certainty that it is true, it perhaps can be rationally supported, shown to be a rational belief.

Consider again the case of the fawn's suffering. Is it reasonable to believe that there is some greater good so intimately connected to that suffering that even an omnipotent, omniscient being could not have obtained that good without permitting that suffering or some evil at least as bad? It certainly does not appear reasonable to believe this. Nor does it seem reasonable to believe that there is some evil at least as bad as the fawn's suffering such that an omnipotent being simply could not have prevented it without permitting the fawn's suffering. But even if it should somehow be reasonable to believe either of these things of the fawn's suffering, we must then ask whether it is reasonable to believe either of these things of all the instances of seemingly pointless human and animal suffering that occur daily in our world. And surely the answer to this more general question must be no. It seems quite unlikely that all the instances of intense suffering occurring daily in our world are intimately related to the occurrence of greater goods or the prevention of evils at least as bad; and even more unlikely, should they somehow all be so related, that an omnipotent, omniscient being could not have achieved at least some of those goods (or prevented some of those evils) without permitting the instances of intense suffering that are supposedly related to them. In the light of our experience and knowledge of the variety and scale of human and animal suffering in our world, the idea that none of this suffering could have been prevented by an omnipotent being without thereby losing a greater good or permitting an evil at least as bad seems an extraordinary absurd idea, quite beyond our belief. It seems then that although we cannot prove that (1) is true, it is, nevertheless, altogether reasonable to believe that (1) is true, that (1) is a rational belief.\footnote{One might object that the conclusion of this paragraph is stronger than the reasons given warrant. For it is one thing to argue that it is unreasonable to think that (1) is false and another thing to conclude that we are therefore justified in accepting (1) as true. There are propositions such that believing them is much more reasonable than disbelieving them, and yet are such that withholding judgment about them is more reasonable than believing them. To take an example of Chisholm's, it is more reasonable to believe that the Pope will be in Rome (on some arbitrarily picked future date) than to believe that he won't; but it is perhaps more reasonable to suspend judgment on the question of the Pope's whereabouts on that particular date, than to believe that he will be in Rome. Thus it might be objected, that while we've shown that believing (1) is more reasonable than disbelieving (1), we haven't shown that believing (1) is more reasonable than withholding belief. My answer to this objection is that there are things we know which render (1) probable to the degree that it is more reasonable to believe (1) than to suspend judgment on (1). What are these things we know? First, I think, is the fact that there is an enormous variety and...
Returning now to our argument for atheism, we've seen that the second premise expresses a basic belief common to many theists and nontheists. We've also seen that our experience and knowledge of the variety and profusion of suffering in our world provide rational support for the first premise. Seeing that the conclusion, 'There does not exist an omnipotent, omniscient, wholly good being' follows from these two premises, it does seem that we have rational support for atheism, that it is reasonable for us to believe that the theistic God does not exist.

II

Can theism be rationally defended against the argument for atheism we have just examined? If it can, how might the theist best respond to that argument? Since the argument from (1) and (2) to (3) is valid, and since the theist, no less than the nontheist, is more than likely committed to (2), it's clear that the theist can reject this atheistic argument only by rejecting its first premise, the premise that states that there are instances of intense suffering which an omnipotent, omniscient being could have prevented without thereby losing some greater good or permitting some evil equally bad or worse. How, then, can the theist best respond to this premise and the considerations advanced in its support?

There are basically three responses a theist can make. First, he might argue that (1) is false or probably false, but only that the reasoning given in support of it is in some way defective. He may do this either by arguing that the reasons given in support of (1) are in themselves insufficient to justify accepting (1), or by arguing that there are other things we know which, when taken in conjunction with these reasons, do not justify us in accepting (1). I suppose some theists would be content with this rather modest response to the basic argument for atheism. But given the validity of the basic argument and the theist's likely acceptance of (2), he is thereby committed to the view that (1) is false, not just that we have no good reasons for accepting (1) as true. The second two responses are aimed at showing that it is reasonable to believe that (1) is false. Since the theist is committed to this view, I shall focus the discussion on these two attempts,

attempts which we can distinguish as 'the direct attack' and 'the indirect attack'.

By a direct attack, I mean an attempt to reject (1) by pointing out goods, for example, to which suffering may well be connected, goods which an omnipotent, omniscient being could not achieve without permitting suffering. It is doubtful, however, that the direct attack can succeed. The theist may point out that some suffering leads to moral and spiritual development impossible without suffering. But it's reasonably clear that suffering often occurs in a degree far beyond what is required for character development. The theist may say that some suffering results from free choices of human beings and might be preventable only by preventing some measure of human freedom. But, again, it's clear that much intense suffering occurs not as a result of human free choices. The general difficulty with this direct attack on premise (1) is twofold. First, it cannot succeed, for the theist does not know what greater goods might be served, or evils prevented, by each instance of intense human or animal suffering. Second, the theist's own religious tradition usually maintains that in this life it is not given to us to know God's purpose in allowing particular instances of suffering. Hence, the direct attack against premise (1) cannot succeed and violates basic beliefs associated with theism.

The best procedure for the theist to follow in rejecting premise (1) is the indirect procedure. This procedure I shall call 'the G. E. Moore shift', so-called in honor of the twentieth century philosopher, G. E. Moore, who used it to great effect in dealing with the arguments of the skeptics. Skeptical philosophers such as David Hume have advanced ingenious arguments to prove that no one can know of the existence of any material object. The premises of their arguments employ plausible principles, principles which many philosophers have tried to reject directly, but only with questionable success. Moore's procedure was altogether different. Instead of arguing directly against the premises of the skeptic's arguments, he simply noted that the premises implied, for example, that he (Moore) did not know of the existence of a pencil. Moore then proceeded indirectly against the skeptic's premises by arguing:

I do know that this pencil exists.
If the skeptic's principles are correct I cannot know of the existence of this pencil.

Thus: The skeptic's principles (at least one) must be incorrect.

Moore then noted that his argument is just as valid as the skeptic's, that both of their arguments contain the premise 'If the skeptic's principles are
